

Extraction Buffer

Lot Number: DQ031015

Volume: 25 ml

Storage: 2 - 8 ° C

Expiration date: 04.05.2017

Background

Mucus Collection Set Extraction Buffer serves as an optimal buffer for epidermal fish mucosa. Vitellogenin, extracted from the mucus by this buffer can then be analyzed in an easy, non-destructive and non-invasive way.

Formulation

Buffer is ready to use.

Storage

Mucus Collection Set Extraction Buffer is stable until indicated expiration date when stored at 2 - 8° C.

FLOQ Swabs™

Lot Number: TTMV00

Quantity: 42

Storage: Room temperature

Expiration date: 31.12.2017

Background

Floq Swabs combine the technology for optimal sample collection. Based on their design, flocked swabs absorb more sample due to capillarity and because the sample stays on the surface, it is eluted rapidly and on its entirety.

Formulation

Swab is ready to use.

Storage

Swabs are stable until indicated expiration date when stored at room temperature.
