ASSAYS AVAILABLE
from Diapharma
**Factor VIII**
- Beneficial for moderate to severe hemophilia A
- Suitable for long-acting replacement therapy
- Bovine factor reagents
  - Coamatic FVIII (K822585)
  - Coatest SP FVIII (K824086)
  - Coatest SP4 FVIII (K824094)

**Factor VIII Inhibitors**
A standardized factor VIII inhibitor assay kit with results expressed in Bethesda units
- FVIII Inhibitor Reagent Kit (5152005)
- FVIII Inhibitor Reagent Kit HCV Neg. (5152009)

**Rox Factor IX**
- Bringing chromogenic FIX determination into the new era
- Study of new FIX variants and hemophilia B gene therapy
- Potency assignments of recombinant and plasma derived FIX

**Factor IX**
- 

**Rox FIX-A**
- Chromogenic assay to determine preactivated FIX (FIXa) in FIX concentrates

**Diapharma Factor X**
- Detection of FX activity for FX deficiency, replacement therapies, and warfarin monitoring

**Rox Factor XIa**
- Highly sensitive method for determination of low levels of FXIa

**Technochrom® Factor XIII**
- Research FXIII deficiency and replacement therapies

**Rox Prothrombin**
- A chromogenic Prothrombin method based upon the prothrombinase complex

**EVALUATE BLEEDING POTENTIAL**

**Technothrombin® TGA Thrombin Generation Assay**
- Give thrombotic potential a number
- Ceveron® alpha automated analyzer for walk-away TGA

**Technozym® vWF:CBA**
- Sensitive and reproducible functional assay tool for VWD research
- Useful for differentiating VWD subtypes

**OTHER HIGH-QUALITY PRODUCTS**

**Tris-BSA**
- Diluted buffer fulfills the EP requirements on assays for coagulation Factor VIII

**Phospholipid Emulsions**
- Suitable for use in analyses related to procoagulant and anticoagulant pathways

Wide variety of chromogenic substrates and enzyme inhibitors also available.

The Diapharma team brings a deep knowledge base and strong technical expertise to every customer interaction.
