

We deliver solutions.

Gene and cell therapy research projects require many decisions, like investigating what products will fit and be most effective. **You need a partner who can support your work at every stage, and help you find solutions ... from the start.**

That's Diapharma.

Explore Our Gene Therapy Research Products

HEMOPHILIA A & B

Chromogenic FVIII – Coamatic® FVIII, Coatest® SP/SP4 FVIII

- Sensitive and reproducible, featuring bovine factor reagents

Chromogenic FIX – ROX FIX*

- Bringing chromogenic FIX testing into the next era with unsurpassed sensitivity

SICKLE CELL

DiaPharma offers a full panel of antibodies for detection of various types of hemoglobin.

Anti-Hemoglobin S antibodies**

Anti-Hemoglobin F antibodies**

*Research use only. Not for use in diagnostic procedures.

**Analyte Specific Reagents (ASR). Analytical and performance characteristics are not established.

HEREDITARY ANGIOEDEMA (HAE)

Technochrom® C1-INH*

- Chromogenic C1 Esterase Inhibitor (C1-INH) activity
- Easy, automatable, simple and fast assay for chromogenic determination of C1-INH activity in plasma or concentrates

Thrombin Generation Testing*

- Technothrombin® TGA
- Ceveron®* for TGA and all-in-one coagulation analyzer

CYSTIC FIBROSIS

ProAxis ProteaseTag™ Active Neutrophil Elastase*

ProAxis NEATstik® Rapid NE Activity*

- Robust assay measures only active NE
- Available in 2 formats – standard and lateral flow, providing NE detection limits ranging from 7.2 – 1000 ng/ml

HEPATOTOXICITY

Cytokeratin 18 (CK18) M30® Apoptosense* and M65® ELISA*

- Serum biomarkers that measure hepatocyte death (apoptosis and necrosis)
- Increased organ specificity for early detection of liver injury

M65® EpiRat ELISA*

- New tool for translational research
- Measure hepatocyte death in rat models

Osteopontin, alpha-GST, N-GAL, L-FABP, Cystatin C* also available

It's not just support. It's solutions.
