

diapharma

YOUR SOURCE FOR HEMOPHILIA CLINICAL AND RESEARCH SOLUTIONS

Hemophilia testing is complicated - DiaPharma scientists can help you choose the right assays for your testing needs.

We offer a variety of kits and reagents to assess factor replacement, mimetics, and rebalancing agents in the clinical and research settings, including chromogenic Factor VIII kits containing bovine FIXa + FX reagents.

DIAPHARMA IS YOUR TRUSTED RESOURCE TO NAVIGATE ASSAYS FOR NOVEL HEMOPHILIA THERAPIES

COAMATIC® FVIII (K822585)
COATEST® SP FVIII (K824086)
COATEST® SP4 FVIII (K824094)

- Contains bovine FIXa + FX reagents
- FDA-cleared

Technochrom FVIII:C 2G (5344102)* on Ceveron® s100 (9822210)*

- Automated sensitive FVIII assay with bovine Factor X reagent

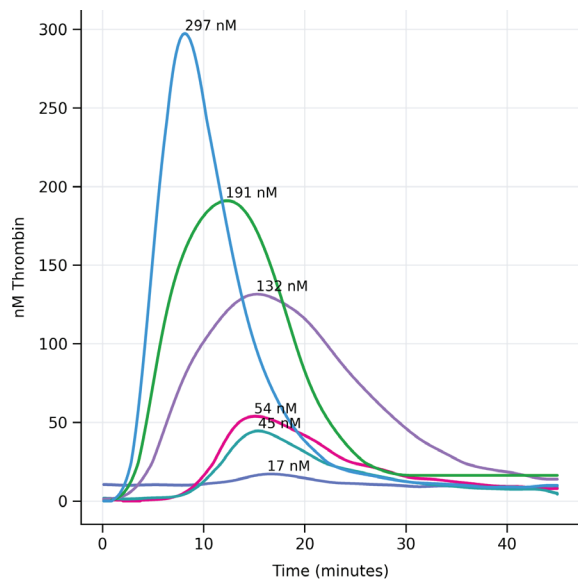

Technoclone FVIII Inhibitor Bethesda Assay (5152005)*

- Reagent kit for determination of FVIII Inhibitor according to Bethesda

Ceveron® TGA RB (5006011)* on Ceveron® s100 (9822210)*

- Automated, standardized thrombin generation assay
- Optimized for measurement of bleeding tendency, hemophilia research & drug development
- Technothrombin TGA* Manual method also available

Thrombin Generation Testing on Ceveron® s100

ROX FIX (900020)*

- Chromogenic FIX for Hemophilia B research
- Accurate and easy to use

It's not just support. It's solutions.
